

25Live Academic Scheduling - Missing Locations Search

There are many reasons that a class would be listed on a Missing Location Assignments Search, including

- # No facility assignment in SIS

- # The SIS space has not been created in 25Live

- # The skip meeting pattern box is checked on the SIS combined section page

- # Another event was/is using the space

To find a listing of the classes that need a space, the scheduler searches for the classes with a missing location assignment using an event directory search. By reviewing each record in 25Live, the scheduler would determine why the class has not been assigned to a space.

Use the attached instructions to create a Missing Space Assignment search and review details of classes with missing or no location in 25Live.
